Kurt Vincent Timajo

Backend Software Engineer
Node.js · TypeScript · Cloud Systems
kurttimajo.dev@gmail.com | +63 956-926-8559 | linkedin.com/in/kurttimajo | kurttimajo.dev

SUMMARY

Backend-focused Software Engineer with 4+ years of software development experience building, integrating, and maintaining production applications. Experienced in Node.js, TypeScript, NestJS, REST APIs, GraphQL, database operations, microservices, and cloud-based deployment using Google Cloud Run and AWS EC2. Hands-on experience with Docker, CI/CD automation, event-driven systems, and production data workflows. Brings a strong foundation in scalable backend architecture, system integration, troubleshooting, and continuous improvement.

TECHNICAL SKILLS

Backend: TypeScript, Node.js, NestJS, Express.js, REST APIs, GraphQL
Databases & Data Processing: MongoDB, PostgreSQL, SQL, data modeling, aggregation pipelines, database migrations, reporting workflows
Cloud & DevOps: Google Cloud Run, AWS EC2, Docker, GitHub Actions, CI/CD pipelines, automated deployments
Architecture: Microservices, event-driven architecture, CQRS, Event Sourcing
Integrations & Security: Xendit, payment webhooks, OAuth 2.0, third-party API integrations, role-based access control
Frontend: React, Next.js, React Native, Tailwind CSS, Zustand
Testing: Jest, Vitest

WORK EXPERIENCE

ScaleForge **Oct 2025 - July 2026**
Mid-level Backend Software Engineer Singapore, Remote

- Developed and maintained backend services using NestJS, GraphQL, and microservice architecture to support application features and system integrations.
- Implemented and enhanced reporting workflows, including Gross Gaming Revenue (GGR) report improvements involving data backfills and aggregation pipeline changes while preserving compatibility with existing production data.
- Contributed to conversion tracking integrations for external advertising platforms, supporting the flow of application events to third-party services.
- Applied event-driven development, CQRS, and Event Sourcing patterns to backend system design and implementation.
- Collaborated with engineers and QA teams to troubleshoot issues, validate changes, and maintain existing functionality during iterative releases.

Freelance / Independent Contract Projects **Jun 2022 - Present**
Full Stack Software Engineer - Part-time Remote

- Designed, developed, deployed, and maintained production web applications and backend services using Node.js, TypeScript, NestJS, Express.js, and MongoDB.
- Built REST APIs and integrated external services to support business workflows, transactions, notifications, and application functionality.
- Designed database models and aggregation workflows to support order management, reporting, inventory, and booking operations.
- Deployed backend applications using Google Cloud Run and AWS EC2, with Docker and CI/CD automation through GitHub Actions where applicable.
- Troubleshot production issues, improved existing application workflows, and maintained deployed systems as business requirements evolved.

Umbra Digital **Mar 2025 - Oct 2025**
Frontend Web Developer Philippines, Remote

- Developed production web applications using React, Next.js, TypeScript, and Tailwind CSS, translating product requirements and UI designs into reusable, responsive components.
- Integrated frontend applications with backend APIs and implemented client-side state management and application workflows in collaboration with designers and backend engineers.

Prince Technologies Corporation **Jan 2025 - Mar 2025**
Full Stack Developer Intern Philippines, Hybrid

- Developed full-stack features using JavaScript/TypeScript, React, Node.js, and database technologies, contributing to API development, frontend implementation, debugging, and code reviews.

SELECTED PRODUCTION PROJECTS

KourtSuite — Sports Venue Management SaaS
TypeScript · Node.js · NestJS · MongoDB · Next.js · GCP Cloud Run · Xendit

• Architected and developed a production SaaS platform integrating court reservations, payment processing, POS, inventory, and staff operations.
• Implemented backend workflows for reservation management, payment integrations, role-based access control, and third-party service integration.
• Deployed and maintained cloud-hosted backend services on GCP Cloud Run, supporting platform reliability and processing ₱200K+ in monthly transactions.

Joesons Autoparts — E-Commerce Platform
TypeScript · Node.js · NestJS · MongoDB · Next.js · React Native · GCP Cloud Run

• Architected and developed a production e-commerce platform supporting end-to-end order processing, inventory management, fulfillment, and delivery workflows.
• Designed backend services and administrative workflows for product data, inventory operations, order management, and payment methods across web and mobile applications.
• Deployed and maintained backend services on GCP Cloud Run, supporting business operations with an estimated ₱400K+ in monthly order value.

Timpla.PH — Meal Kit Ordering Platform
TypeScript · Node.js · Express.js · MongoDB · Next.js · React Native · Docker · GCP

• Architected and developed a production ordering platform integrating customer-facing web and mobile applications with an administrative backoffice.
• Implemented dynamic pricing and serving customization through backend logic that processes ingredient selections and calculates order prices in real time.
• Developed and maintained backend services, database operations, and cloud deployment workflows supporting order processing, business operations, and third-party integrations.

EDUCATION

University of Science and Technology of Southern Philippines, Engineering & Architecture **GWA: 1.73 (Cum Laude)**
Bachelor of Science in Computer Engineering; Major in Software Engineering
